

sealtite™ PRO-PLUS

Sealant for heavy-speed & mixed use applications

SIMONIZ® Sealtite™ PRO -PLUS is a ceramic fiber tire sealant formulated to seal punctures in the tread area of heavy duty, high-speed tires. This unique, environmentally friendly, wheel safe* formulation, instantly creates a permanent seal in tube and tubeless tires.

Sealtite™ PRO -PLUS is specially designed to withstand centrifugal forces and heat build-up in high speed tires. Its unique ceramic fiber formulation give Sealtite™ PRO-PLUS unmatched sealing capabilities.

Sealtite™ PRO -PLUS seals tread punctures up to 10mm in diameter. Designed for high speed tires, Sealtite™ PRO -PLUS is ideal for mixed use applications; trucks which travel over the road and in o-road environments, such as waste trucks and scrap haulers.

This wheel safe* formulation will last the life of the tires.

Formulated for high speed and mixed use applications. Can also be used in industrial and agricultural tires.

*Sealtite™ PRO-PLUS contains corrosion inhibitors to protect the following metals: steel, copper, aluminum brass, magnesium alloy. It meets or exceeds all ASTM standards for antifreeze.

All Simoniz® Sealtite™ tire sealants and conditioners contain a proprietary formulation of corrosion inhibitors that will keep wheels and fittings protected and clean.

- ➔ Seals tread punctures up to 10mm in diameter.
- ➔ Protects wheels and rims from corrosion
- ➔ Saves casings by making dismounting easier
- ➔ Hydrodynamically balances high-speed truck tires. Ideal for waste vehicles.
- ➔ Keeps inner liner supple
- ➔ Increases tread and tire life
- ➔ Freeze protection to -24°F (-31°C)
- ➔ Eliminates rust on rims and wheels
- ➔ Will not block valve stems
- ➔ Environmentally friendly
- ➔ Water soluble

PREVENTS FLAT TIRES

TIRES STAY INFLATED THROUGH NUMEROUS PUNCTURES

- ▶ Reduces air loss due to tread punctures, by 90%. Ceramic fiber technology is the key!
- ▶ Protects rims against corrosion
- ▶ Helps to maintain tire pressure, resulting in extended tire life
- ▶ Protects the environment. Our sealants contain only environmentally non toxic propylene glycol
- ▶ Increases retreadability

Simoniz® Sealrite™ reduces flats by permanently sealing punctures in the tread regardless of the number of punctures. Punctures up to 10mm in diameter in the tread are instantly sealed, and larger punctures are often sealed.

sealrite

PRO-PLUS

Ceramic bers hold the puncturing object in place to prevent further tire damage.

Through centrifugal force, Sealrite™ Tire Sealant forms a protective layer over the entire interior of the tread.

HOW IT WORKS:

When a puncture occurs, ceramic fibers between 2mm and 20mm in length instantly build a plug at the puncture site. Sealrite™ will seal around a nail or other object, but is recommended that such objects be removed.

Ceramic ber technology: Our products are the world's only sealants which incorporate ceramic fibers into its formulations. Ceramic fibers, which have the appearance of fish hooks, grab onto the rubber at the puncture site. Unlike those of other sealants, this plug never washes away and is permanent.

Savings: Our sealants are competitively priced, and in some instances, cost 40% less than our nearest competitor's sealant.

Sealant for heavy-duty high-speed Tires
